A Technical Writer and Web Developer.

CORE SKILLS

Technologies

- Kubernetes
- Hami
- Docusaurus
- GitHub Actions
- GitOps

Languages

- Markdown
- Javascript
- React
- CSS
- HTML

OPEN-SOURCE WORK EXPERIENCES

I have spent the last one year studying cloud native technologies and contributing to open-source projects in the CNCF ecosystem. These projects include:

Project: Hami

Contributor Role: Technical Writer

Contributions:

- **Pull requests**
 - Contributed to the tutorial documentation (Lab-1) so it includes AWS EC2 GPU instances alongside the existing Google Cloud setup, adding provider-specific tabs, AWS CLI instance provisioning steps, Kubernetes/GPU Operator version-compatibility guidance, and kernel configuration fixes — enabling multi-cloud completion of the HAMi tutorial [PR #737](#).
 - Updated Project HAMi's GPU partitioning lab-3 documentation to fix AWS EC2 workflow instructions, adding steps to copy example YAML manifests from the local machine to the EC2 instance via scp and clarifying AWS vs. GCP workflow differences, while leaving the GCP instructions unchanged [PR 757](#).
 - Improved terminology consistency in HAMi's core architecture documentation by standardizing "in-container resource control" wording across current and versioned docs [PR 710](#), merged.
- **Reviewed Pull Requests From Other Contributors:**
 - Left 6 inline suggestions fixing grammar and lab descriptions [PR #774](#), open.
 - Flagged a version mismatch, questioned unneeded PodGroup write permissions, and clarified gang-scheduling Pod requirements [PR #734](#), open.

Project: Kubernetes

Contributor Role: Technical Writer

Contributions:

- Improved Kubernetes' CertificateSigningRequest documentation by restructuring the API-based signers section into its own top-level topic, adding a YAML manifest-based alternative to the shell-based CSR creation workflow, clarifying signer-specific valid usages, and cross-referencing a hands-on client-certificate tutorial [PR 56252](#), merged.
- Added a "See also" reference linking the Gateway API documentation to the official Gateway API TLS Guide, helping readers find HTTPS/TLS listener configuration guidance [PR 56421](#), merged.
- Fixed a broken readinessProbe example in the Kubernetes pod probes documentation by updating the command to run through /bin/sh -c, ensuring it works reliably across containers where cat is not directly on PATH [PR 54858](#), merged.
- Authored a new task page, "Block Use of Services with External IPs," picking up and completing a stalled draft to document how cluster admins can restrict Services from using external IPs [PR 54802](#), in review.
- Clarified the "Connecting Applications with Services" tutorial by specifying that TLS keys and certificates must be base64-encoded when written directly into a YAML manifest [PR 55998](#), merged.

Project: Kubestellar

Contributor Role: Technical Writer

Contributions:

- Clarified the AI missions setup guide by specifying the exact options to select when creating a new mission and standardizing capitalization of "Kubernetes" for consistency [PR 2709](#), merged.
- Corrected a mislabeled runbook name from "install-kubestellar" to "install-kubestellar-controller" to accurately reflect that it installs the KubeStellar controller [PR 2252](#), merged.
- Fixed CONTRIBUTING.md to restore the correct existing markdownlint command reference (PR [PR 2687](#), merged).
- Added a GitHub Actions workflow to automatically run markdownlint on Markdown and MDX files during pull requests targeting the main branch. [PR 2494](#), merged.

EDUCATION

Auchi Polytechnic Auchi, Nigeria

Higher National Diploma in Painting
